As with all electrical devices, certain safety precautions should be taken during installation and operation. PLEASE READ AND FOLLOW ALL INSTRUCTIONS CAREFULLY.

**IMPORTANT SAFETY INSTRUCTIONS - DO NOT DISCARD**

**WARNING** - Risk of electrical shock. Do not permit any electrical appliances (such as a light, telephone, radio, or television) within five feet of the whirlpool bathtub.

**INSTRUCTIONS PERTAINING TO A RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS**

**WARNING**: When using this unit, basic precautions should always be followed, including the following:

1. READ AND FOLLOW ALL INSTRUCTIONS.

2. DANGER: To reduce the risk of injury, do not permit children to use this unit unless they are closely supervised at all times.

3. Use this unit only for its intended use as described in this manual. Do not use attachments not recommended by the manufacturer.

4. Never drop or insert any object into any opening.

5. Do not operate this unit without the guard over the suction fitting.

6. The unit must be connected only to a supply circuit that is protected by a ground-fault circuit-interrupter (GFCI). Such a GFCI should be provided by the installer and should be tested on a routine basis. To test the GFCI, push the test button. The GFCI should interrupt power. Push the reset button. Power should be restored. If the GFCI fails to operate in this manner, the GFCI is defective. If the GFCI interrupts power to the bathtub without the test button being pushed, a ground current is flowing, indicating the possibility of an electric shock. Do not use this hydromassage bathtub. Disconnect the hydromassage bathtub and have the problem corrected by a qualified service representative before using.

7. (For permanently connected units) A green-colored terminal (or a wire connector marked G, GR, Ground, or Grounding) is provided within the terminal compartment. To reduce the risk of electric shock, connect this terminal or connector to the grounding terminal of your electric service or supply panel with a conductor equivalent in size to the circuit conductors supplying this equipment.

8. SAVE THESE INSTRUCTIONS
WARNING! RISK OF ELECTRICAL SHOCK - All electrical connections must be accomplished by a qualified electrician in accordance with the National Electric Code and any local codes. In addition, a GFCI MUST protect all branch circuits to the whirlpool, and every electrical component MUST be grounded.

1. Route two separate branch circuits to the junction box near the whirlpool. **BRANCH CIRCUIT MUST INCLUDE A GROUND AND BE GFCI PROTECTED.**

2. Use copper conductors only.

3. Insure the heater and pump are properly **BONDED** as required by local, state or national codes.

**CAUTION**

Before use of the pump and heater, test the GFCI for proper operation. The pump and/or heater should turn off when the GFCI “Test” button is pressed.

**OPERATING INSTRUCTIONS**

Your whirlpool tub has been designed to provide comfort at the press of a button. Once pressed, the pump and/or heater will activate automatically and maintain the temperature of the water in the bathtub.

**High Limit:** The heater includes a high-limit safety device that is designed to trip if the water exceeds a safe preset, temperature. If the high-limit trips, the heater will be disabled until the power has been removed from the heater for sufficient time to allow the heater to cool and the switch to automatically reset. This is most easily accomplished by turning off the circuit breaker to the tub. Should the high-limit trip repeatedly, do not use the tub until service has been performed.

**Note:** Do not attempt to service. There are no field serviceable parts. Contact a qualified technician for service issues.

The finished surface of this bath tub/shower unit is manufactured from high-quality polyester gel coat or acrylic sheet. It will provide many years of high-gloss beauty by following these instructions.

**WAX ENTIRE UNIT** at least once per year. Any Carnuba based wax will do a good job. If using a paste wax, allow wax to dry i.e. a haze develops, then remove with a soft cotton rag. This gives the best and longest lasting results.

**DO NOT USE ABRASIVE CLEANERS** like Ajax or Comet; these will scratch the surface. Use liquid cleaners only. There are a variety of cleaners available at your local supermarket.

**DO NOT USE SOLVENTS** such as lacquer thinner; these are very flammable and will harm the finish. In extreme hard water conditions, mineral deposits may build up over time. These can be fairly easily removed with Arm & Hammer Baking Soda. Make a paste with water and scrub affected areas. Wax after scrubbing.

Our products carry a 3-year warranty against factory defects. Our jetted tubs also carry a 3-year warranty against factory defects on the tub and 1 year warranty on the whirlpool pump. For service, call (760) 246-0019 and ask for Customer Service Desk.
